

Juan Perez Gallardo

Senior Staff Site Reliability Engineer (SRE) | Infrastructure Architect

☎ (+34) 616635351 | ✉ jpgallardo@gmail.com | 🏠 jpgalla.github.io | 📷 jpgalla | 🌐 juanperezgallardo |

This is my original, generic, CV. Not an AI-generated one tailored to this role.

Summary

Senior Staff Site Reliability Engineer and Infrastructure Architect with over 20 years of experience designing secure, resilient, and scalable systems. Currently driving the engineering strategy for a high-stakes greenfield product, focusing on advanced observability, performance optimization, and deep integration within complex, proprietary infrastructure environments.

I specialize in translating complex architectural challenges into stable, scalable solutions. By merging foundational systems knowledge with modern automation, I drive operational maturity and mentor teams to build with resilience as a first principle.

Skills

- **Core Systems & Network:** Linux Internals, TCP/IP, DNS, HTTP/S, Load Balancing, Kernel Tuning, BGP.
- **Security:** PKI, TLS/SSL, Firewall Hardening, Identity Mgmt (LDAP/SAML), DevSecOps.
- **Cloud Native & SRE:** Kubernetes (K8s), Helm, Docker, GitOps (FluxCD/ArgoCD), Terraform, Ansible.
- **Observability:** Prometheus, Grafana, Loki, Distributed Tracing, Alerting Strategies.
- **Programming:** Python, Bash, C, Java.
- **Architecture:** Distributed Systems, Microservices, High Availability (HA), Disaster Recovery (DR), Cloud Architecture.

Key Achievements

- **High-Scale Architecture:** Re-architected a monolithic blockchain platform into a resilient Kubernetes microservices ecosystem, achieving a 50% cost reduction while enabling zero-downtime deployments via GitOps.
- **Security Engineering:** Designed and implemented an automated security compliance framework (CIS, NIST) for a major banking infrastructure, integrating policy-as-code to eliminate manual hardening overhead.
- **Infrastructure Reliability:** Engineered a unified IaC strategy (Terraform/Ansible) across multi-cloud environments, reducing provisioning latency by 40% and solving critical configuration drift issues to ensure system consistency.

Experience

Netskope

Remote

SR. STAFF DEVOPS ENGINEER

2025 - Present

Currently working on the reliability and infrastructure strategy for a high-stakes greenfield product, ensuring its seamless integration into Netskope's global NewEdge network.

- **Global Infrastructure Integration:** Orchestrating the architectural integration of new product services into the Netskope NewEdge private cloud, solving complex networking and scalability challenges at the edge.
- **Advanced Observability:** Designing a high-fidelity monitoring ecosystem (Prometheus, Grafana) to gain deep visibility into system behavior, proactively detecting anomalies and driving latency optimization initiatives.
- **Systems Engineering:** Ensuring product stability and portability across diverse operating systems and hardware architectures, resolving low-level compatibility issues to maximize performance.

SGULAR

Remote

CLOUD ARCHITECT, DEVOPS, SRE

2021 - 2025

Served as a Lead Site Reliability Engineer and Architect for high-profile clients in banking and blockchain sectors, designing scalable cloud-native ecosystems and driving the adoption of SRE best practices.

- **Production Architecture:** Re-engineered legacy monoliths into resilient Kubernetes microservices clusters, implementing self-healing mechanisms and GitOps workflows that reduced operating costs by 50% while maximizing uptime.
- **Security Engineering (DevSecOps):** Designed an automated governance framework for banking infrastructure using Policy-as-Code, ensuring strict compliance (CIS, NIST, OWASP) without sacrificing deployment velocity.
- **Infrastructure as Code (IaC):** Architected modular, idempotent infrastructure libraries using Terraform and Ansible, standardizing deployments across multi-cloud environments (AWS/GCP) and reducing provisioning latency by 40%.
- **Observability & Performance:** Overhauled the telemetry stack using Prometheus and Grafana to track Service Level Objectives (SLOs), resulting in a 30% improvement in system response times and faster incident resolution.

Accenture

Remote

CLOUD TRANSFORMATION & ARCHITECT ASSOCIATE MANAGER

2020 - 2021

Led technical strategy and cloud architecture for enterprise-level digital transformation projects, focusing on reliability, scalability, and operational excellence across multi-cloud environments.

- **Enterprise Cloud Migration:** Orchestrated complex migrations of mission-critical applications to AWS, Azure, and GCP, executing zero-downtime cutover strategies and ensuring strict data integrity.
- **Reliability Architecture:** Defined and enforced engineering standards based on the Well-Architected Framework, improving system fault tolerance and security posture across distributed environments.
- **Capacity Planning & Optimization:** Led resource optimization initiatives for multi-cloud infrastructures, balancing performance requirements with cost efficiency through rigorous capacity planning and auto-scaling strategies.
- **Technical Leadership:** Directed the technical assessment of legacy infrastructures, translating high-level business goals into concrete, scalable architectural blueprints and trusted engineering roadmaps.

WhiteBearSolutions

TECH LEAD & SENIOR SOLUTION ARCHITECT

2006 - 2020

Remote

Played a pivotal role in the engineering and delivery of Linux-based appliances for Storage, Backup, and Identity Management. Evolved from hands-on systems administration to leading technical operations for mission-critical environments.

- Site Reliability & 24/7 Ops:** Directed the Managed Services division, establishing Incident Management protocols and On-Call rotations to guarantee SLAs for critical clients, acting as the final escalation point for complex system outages.
- Linux & Network Internals:** Performed deep systems engineering including Linux kernel tuning, TCP/IP stack optimization, and network hardening (iptables, VPNs, IDS/IPS) to ensure the performance and security of proprietary appliances.
- Storage & Data Durability:** Architected robust Disaster Recovery and Backup solutions involving complex storage subsystems (ZFS, LVM, NFS, iSCSI), ensuring data integrity and availability for enterprise datasets.
- Identity Management (IAM):** Designed and deployed large-scale directory services and authentication architectures (OpenLDAP, Kerberos, SAML), standardizing access control and identity federation across heterogeneous networks.
- Process Engineering:** Standardized operational workflows aligning with ITIL/ISO 20000, transforming ad-hoc sysadmin tasks into structured, repeatable engineering processes.

Mecalux

SYSTEM AND NETWORK SECURITY ADMINISTRATOR

2003 - 2006

Barcelona

Administered complex, heterogeneous IT environments for a global industrial leader. Laid the groundwork for a career in reliability by managing critical network infrastructure and data systems across international locations.

- Multi-OS Systems Administration:** Managed and secured a diverse fleet of servers including Unix, Solaris, Linux, and Windows, ensuring high availability for industrial warehouse management systems (WMS).
- Database Administration (DBA):** Performed database maintenance and tuning for Oracle and MySQL clusters, optimizing query performance and establishing robust backup/recovery strategies.
- Network Engineering:** Designed and maintained secure network topologies, implementing encrypted VPNs, routing protocols, and firewall rules to protect sensitive corporate data across global offices.
- Security Implementation:** Defined and enforced corporate security policies for remote access and data transmission, ensuring compliance and data integrity in a distributed environment.

Education

Universitat Oberta de Catalunya (UOC)

BACHELOR OF SCIENCE (B.S.), COMPUTER ENGINEERING

Barcelona, Spain

- Key Coursework:** Achieved High Distinction (A+) in **Graph Theory, Complexity Analysis**, and Computer Fundamentals. Strong focus on algorithmic efficiency.
- Bachelor Thesis:** "AI Agents in Offensive Security". Research on leveraging Artificial Intelligence for automated ethical hacking and vulnerability detection.

Tiempos Modernos

ASSOCIATE DEGREE (CFGS - L5 EQF), SYSTEMS ADMINISTRATION

Zaragoza, Spain

- Systems Specialization:** Intensive training in C Programming, GNU/Linux internals, and Unix System Libraries. Focused on memory management, pointers, and low-level networking.

Certifications

2025	Google Cloud - Professional Cloud Database Engineer	Google
2024	Google Cloud - Professional Google Workspace Administrator	Google
2024	Google Cloud - Professional Machine Learning Engineer	Google
2024	Google Cloud - Professional Cloud Network Engineer	Google
2024	Google Cloud - Professional Cloud Security Engineer	Google
2024	Google Cloud - Professional Cloud Architect	Google
2023	AWS - Certified Solutions Architect Professional	AWS
2020	AWS - Certified Solutions Architect Associate	AWS
2020	AWS - Certified Cloud Practitioner	AWS
2020	Microsoft AZ-900: Microsoft Azure Fundamentals	Microsoft
2020	Cisco Certified Network Professional	Cisco
2020	Network Security Manager	COETIC
2020	IS/IT Project Manager	CPETIG
